

1. Using policies to limit deployment locations (regions)
2. Using policies to limit allowed resource types
3. Using policies to enforce resource tagging
4. Using policies to enforce proper resource logging (resource log)
5. Storage accounts should restrict network access using virtual network rules
6. Secure transfer to storage accounts should be enabled
7. Storage accounts should be limited by allowed SKUs
8. Storage accounts should prevent shared key access
9. Storage accounts should disable public network access
10. Storage accounts should have the specified minimum TLS version
11. Azure Cosmos DB should disable public network access
12. Azure Cosmos DB accounts should have firewall rules
13. Configure CosmosDB accounts with private endpoints
14. Enable Azure Cosmos DB throughput policy
15. Function apps should use managed identity
16. Configure Function apps to turn off remote debugging
17. Function apps should only be accessible over HTTPS
18. Function apps should use latest 'HTTP Version'
19. Azure Service Bus namespaces should use private link
20. Service Bus Namespaces should disable public network access
21. Resource logs in Service Bus should be enabled
